ABOUT

Master's student in Intelligent Computer Systems at USTHB, with a Bachelor's degree in Computer Science and a strong interest in Artificial Intelligence, Machine Learning, and Data Science. Strong software development background gained through multiple professional and academic projects, with hands-on experience in backend development, mobile application development, databases, and full-stack solutions.

SKILLS

- Advanced software development skills with Flutter, Dart, Laravel and PHP
- Experience with REST APIs, Firebase, MySQL and Oracle databases
- Strong object-oriented programming skills with C#, Java and Dart
- Strong foundation in Artificial Intelligence, Machine Learning and Deep Learning
- Proficient in Git, GitHub, Jupyter Notebook, Anaconda and VS Code

EXPÉRIENCES PROFESSIONNELLES

Final-Year Internship – Mobile Application Development | Djezzy

January 2025 – June 2025

- Developed a mobile eSIM purchasing application with facial recognition and NFC-based identity verification.
- Integrated biometric and NFC technologies to enhance the user verification process.
- Contributed to the development of the mobile application and its backend infrastructure.

Practical Internship – Software Development | Ittihad Int Incubator

September 2025 – November 2025

- Contributed to the development of Routimize, a route optimization system for distribution operations.
- Participated in the development of features for optimizing delivery routes and improving distribution efficiency.
- Worked within a collaborative software development environment.

Backend Developer – To The Moon With English

February 2026 – September 2026

- Designed and developed the complete backend of an online English learning platform.
- Developed REST APIs, authentication, course management, quizzes, evaluations, enrollments and user feedback features.
- Designed the backend architecture and database structure to support the platform's core functionalities.

EDUCATION

Master's Degree in Intelligent Computer Systems

USTHB – University of Science and Technology Houari Boumediene, Algiers

September 2025 – Present

Bachelor's Degree in Computer Science

USTHB – University of Science and Technology Houari Boumediene, Algiers

September 2022 – June 2025

KEY ACHIEVEMENTS

- Developed a Deep Learning model for satellite-based crop classification, achieving 91.6% Overall Accuracy and 91.4% F1-score.
- Designed and evaluated AI models using CNNs, Transformers and Computer Vision, with hands-on experience in model experimentation and performance analysis.
- Developed a mobile eSIM application integrating facial recognition and NFC-based identity verification during my internship at Djezzy.
- Designed and implemented the complete backend of an online English learning platform, including system architecture, REST APIs and database design.
